DAY ONE TECHNOLOGIES

Who we are for, and where.

Private equity firms and their portfolio companies, founder-led growth companies and enterprise operators that need senior technology, AI and data execution, in any market except India and Nigeria.

01

PE firms and portfolio companies

Sponsors whose value-creation plan needs technology, AI or data delivered, not described.

Titles	Operating Partner, VP Portfolio Operations, portfolio CEO, CTO
Trigger	A closed deal and a plan that needs execution; a stalled platform build; an AI mandate from the board.

02

Founder-led growth companies

Companies scaling past what the in-house team can ship, without a full-time senior technology leader.

Titles	Founder, CEO, COO, CTO
Trigger	Platform rebuild, AI roadmap, a need for fractional senior leadership that stays until the outcome is real.

03

Enterprise operators

Operators in Financial Services, Logistics and Supply Chain, Trade Finance, Healthcare, Manufacturing, Technology, Retail, Agriculture and Education.

Titles	CIO, Chief Data Officer, Head of Transformation, COO
Trigger	Data platform, AI and ML platform, API platform, digital twin or security programme with a named owner.

FIRMOGRAPHIC FIT

- Engagements that fit Operating Partner (6–24 months), Strategic Build (3–12 months) or Venture Studio models
- Budget band of $50K or more, with $100K+ the sweet spot seen on the project form
- A named executive who owns the outcome and can start within six months
- A clear technology, AI or data problem tied to a measurable business number

QUALIFY IN THE FIRST CALL

- Which sector, and who owns the outcome?
- What number should the technology move: margin, pipeline, cycle time?
- What budget band and start date?
- Which engagement model fits: operating partner, strategic build or venture studio?

NOT OUR ICP

- Staff augmentation and commodity development requests
- Small-business retail or one-off website work
- RFP, procurement and resale requests (for example hardware tenders)
- Lead-list, SEO and agency pitches
- Buyer or company headquartered in India or Nigeria

GEOGRAPHY: ANYWHERE EXCEPT INDIA AND NIGERIA

Core · United States | United Kingdom & Ireland | Canada | EU & Nordics | Australia & New Zealand | UAE, Saudi Arabia & Qatar | Singapore | Israel | Brazil & Mexico | Everywhere else | ✕ India | ✕ Nigeria

How it is enforced. Leads from India or Nigeria (detected from the phone code, email domain or stated location) are flagged “Outside ICP region” and left out of every KPI and the funnel counts. Turn on “Show test & spam” on the Leads page to review them. Outbound lists exclude accounts headquartered there. **Right now:** 0 of 4 Day1Tech submissions are outside the region.

DAY ONE TECHNOLOGIES

Operators do not shop for developers, so a Diagnostic. Reach, capture, convert.

A CEO, CTO or operating partner is not looking for a vendor. They want to know which technology move changes the number, and who will own delivering it. So each stage is filled with proof of execution: a direct answer, a readiness check and a fixed first step, built as repeatable assets that share one voice and one next step.

TOFU · REACH

Answer the question first

Goal: Operators and sponsors searching for a technology operating partner, fractional CTO or AI execution find Day One and get a direct answer.

ASSETS

- **Answer pages.** "What does a technology operating partner do?", "Operating partner or fractional CTO?", "What does an AI programme really cost?" Fifty-word answer first, detail after, marked up as FAQ.
- **Case-study one-pagers.** One per published case: defect detection, NLP platforms, fintech, energy SaaS, e-commerce. Problem, build, measured result.
- **Outcome cards.** The published representative outcomes (30% gross margin improvement, 2.5x pipeline, 40% shorter delivery cycle), each linked to the case it came from.
- **Operator POV posts.** What breaks between a board's AI mandate and a shipped platform, written by the people who ship it.

CHANNELS

LinkedIn, search and AI answer engines (the site must be pre-rendered so crawlers can read it), Clutch reviews, PE operating-partner communities, partner referrals through the partnerships page.

MEASURE

Non-brand impressions, visits to /operating-partner, case-study views per 100 visits, and how often AI assistants cite Day One in a weekly ten-prompt check. One metric to beat: visits to /operating-partner.

LIVE NOW Traffic is not connected yet (needs GA4 and Search Console). Audit: 10/10 AI crawlers allowed, 61 sitemap URLs, 0 words visible to crawlers.

MOFU · CAPTURE

The Readiness Check

Goal: Turn a reader into a named, ICP-fit contact. Today the exit is a long project form or a contact form.

ASSETS

- **Tech Readiness Check.** Ten questions across strategy, data, AI, platforms and delivery. Returns a score and the first two fixes as a one-page report by email.
- **90-day roadmap sample.** The operating plan on one page: diagnostic in weeks 1–2, roadmap by day 30, execution from day 60, early wins by day 90.
- **Engagement model guide.** Operating Partner, Strategic Build and Venture Studio side by side, with who each one fits.
- **Four-email nurture.** One case, one framework, one outcome, one invitation to a fit call.

CHANNELS

Start-a-project page with three choices: take the check, get the roadmap sample, book a call. Comment keyword ("CHECK") on LinkedIn posts. Capture company, role and country on every form.

MEASURE

Checks completed per 100 visits, email capture rate, ICP-fit share of captures, calls booked. Baseline in week 4 before setting targets.

LIVE NOW 4 submissions to date, 0 qualified and in region. Capture rate per visit needs traffic data.

BOFU · CONVERT

A fixed first step

Goal: A diagnostic booked within two weeks of first contact, and an engagement inside the quarter.

ASSETS

- **Fit call.** Thirty minutes scripted around the ICP questions: sector, outcome owner, budget band, start date.
- **Two-week diagnostic.** Fixed scope and price, ending in a transformation roadmap. It is weeks 1–2 of the published first-six-months plan.
- **Proof stack.** Named cases, Clutch reviews, and the engagement models with scope and duration.
- **One-page proposal.** Roadmap, team, economics and the zero-to-180-day plan.

EXPANSION LOOP

At day 90, run an early-wins review, then propose a Strategic Build or a second function, and ask for two portfolio introductions.

MEASURE

Lead to call, call to diagnostic, diagnostic to engagement, cycle length in days, and declared pipeline from the form's budget bands. Baseline these in week 4 before setting targets.

LIVE NOW 0 hot, 0 warm, no declared pipeline yet.

FIX BEFORE ANY OF IT

- Pre-render the site. AI crawlers currently read 0 words, so the assets below are hard for AI assistants to find or cite.
- 100% of form submissions are tests, cold pitches or out-of-region. Add a honeypot or Turnstile and a Country field to the form before driving traffic to it.
- Align the declared service area with the ICP: llms.txt lists US regions only, while the ICP is every market except India and Nigeria.

MON	TUE	WED	FRI	SUN
Answer page or case-study one-pager	Fit-call day	Readiness Check post with comment keyword	Nurture email and a partner referral ask	Review ICP fit of the week's leads; run the AI citation check
